

European Economic Integration

Lecturer	Room	Phone	Office Hours
Prof. Dr. Thies Büttner	LG 6.111	5302-200	by appointment
Annalisa Tassi	LG 6.116	5302-204	Th, 11 – 12

Contents:

While we often think of the economy in national terms, economic integration is a key characteristic of the current environment. This is most visible in the context of the European Union with its emphasis on free movements of goods and services within the single European market. However, the current status of integration in Europe is the result of a complex process stretching over several decades and resulting in a unique set of opportunities and challenges faced by member states today.

The course starts by looking back at the stages of economic integration that Europe has gone through on the road to its current form. It then proceeds with a block on governance and fiscal federalism that explains the background against which integration is set. In a third content-block, the subject turns to the institutions of the European Union and the rules by which decisions are made in an integrated economy. Finally, current circumstances affecting integration are addressed. In particular, the course covers challenges and threats to integration that the European Union is facing in the present.

Learning Objectives:

Students learn the use of economic principles to analyze and assess the effects of different stages of economic integration on economic performance. They build an understanding of the effects of national economic policies and how they change under conditions of economic integration, while also learning about the potential benefits of economic policy cooperation in an integrated economy.

Students acquire knowledge of the assignment of responsibilities for economic and fiscal policies in Europe and of the European institutions. Finally, they obtain insights on current challenges and threats to economic integration in Europe.

Further Information:

The course is scheduled to take place on site. Attendance in the classroom is expected for both lecture and tutorial. Due to room restrictions, class size is capped at 30 students.
